

Company Dinner

Lili works part-time in a restaurant near her campus as a waitress. One day, a boss from a company down the street decided to hold a company dinner in the restaurant she worked at. Before the dinner, the food is arranged in a sorted order A according to their type. Moments later, the manager of the restaurant confronted Lili and asks Q questions, each one asks how many foods of type B_i are there. Lili has asked you as her friend to help her count and answer as fast as possible.

Format Input

A single line with two integers N and Q denoting the number of food and the number of question respectively, followed by a line containing N elements denoting the type of the foods and another Q lines each containing a single integer denoting the number of occurrences of the type of food asked by the manager.

Format Output

Q lines each with a single integer denoting the number of occurrence of B_i in A.

Constraints

- $1 \le N, Q \le 10^5$
- $1 \le A_i, B_i \le 10^9$
- $A_i \le A_j$ for all $1 \le i \le j \le N$
