

### Another Classic Problem

Lili was working on her mathematic homework, and suddenly, she found another classic problem. The problem is: "Given three light bulbs X, Y, and Z. Bulb X light up every A seconds, bulbs Y light up every B seconds, and bulb Z light up every C seconds. If three bulbs light up together for the 1-st time at 0-th second, the 2-nd time this three bulbs will light up together at the same time will be at  $K_1$ -th second. Find  $K_1$ !"

Lili got bored by this question. Lili challenge herself and she figured out a challenging problem. She wants to find the sum of all  $K_i$  which satisfy  $L \leq K_i \leq R$ , where when at  $K_i$ -th seconds, the three bulbs light up together for the i + 1-th time.

Solve Lili's challenge!

#### Format Input

There are T testcases. Every testcase consists of five integers A, B, C, L, and R as described above.

### Format Output

Output T testcases with format "Case #X:", where X indicates the testcase number and then followed by an integer indicates the answer to Lili's challenge.

#### Constraints

- $1 \le T \le 10$
- $1 \le A, B, C \le 100$
- $1 < L < R < 10^9$

# Sample Input (standard input)

```
5
1 2 3 1 20
2 3 5 30 30
2 3 5 30 90
11 11 11 10 40
2 3 4 10 30
```

# Sample Output (standard output)

Case #1: 36
Case #2: 30
Case #3: 180
Case #4: 66
Case #5: 36

#### Another Classic Problem

Lili sedang mengerjakan PR matematikanya, tiba-tiba dia menemukan soal klasik. Soal tersebut: "Diberikan tiga bohlam lampu X, Y, dan Z. Bohlam X menyala setiap A detik, bohlam Y menyala setiap B detik, dan bohlam Z menyala setiap C detik. Jika ketiga bohlam tersebut menyala bersamaan untuk pertama kalinya pada detik ke-0, maka bohlam tersebut akan menyala bersamaan untuk kedua kalinya pada detik ke- $K_1$ . Temukan  $K_1$ !"

Lili sangat bosan dengan soal seperti ini. Lili menantang dirinya dan ia menemukan soal yang menantang. Ia ingin mendapatkan jumlah dari seluruh  $K_i$  yang memenuhi  $L \leq K_i \leq R$ , dimana saat detik ke- $K_i$ , ketiga bola tersebut menyala bersamaan untuk ke-i+1 kalinya.

Jawab soal menantang dari Lili!

#### Format Input

Terdapat T testcase. Setiap testcase terdiri dari lima bilangan bulat A, B, C, L, dan R seperti yang dideskripsikan di atas.

### Format Output

Output T testcase dengan format "Case #X: ", dimana X menandakan nomor testcase dan diikuti jawaban soal dari Lili.

#### Constraints

- $1 \le T \le 10$
- $1 \le A, B, C \le 100$
- $1 \le L \le R \le 10^9$
