

# Jojo and Trains

Jojo usually commutes to work by boarding a train at Bee Noose station. Recently, the time table format at Bee Noose station was changed. The new format is giving Jojo trouble.

The time table at Bee Noose station consists of two parts. The first part contains the ID of each train and the departure time at which the corresponding train will depart. The second part of the time table tells Jojo the destination and origin of each train.

Unfortunately, while the first part of the time table is sorted by departure time, the order of the second part is completely disorganized. Help Jojo figure out which route he needs to take by combining both parts of the time table into a single complete time table.

### Format Input

The first line contains a single integer N, the number of routes at Bee Noose station. 2N lines will follow.

The next N lines will contain two strings  $ID_i$  and  $T_i$ . This is the first part of the time table, which tells Jojo that the train with ID  $ID_i$  will depart at  $T_i$ .

The next N lines will contain three strings  $ID_i$ ,  $O_i$ , and  $D_i$ . This is the second part of the time table, which tells Jojo that the train with ID  $ID_i$  is a train going from  $O_i$  to  $D_i$ .

# Format Output

Output a complete time table - the first part of the time table with the origins and destinations added besides the departure times.

#### Constraints

- 1 < N < 1000
- $1 \le |ID_i| \le 20$
- $1 \le |O_i|, |D_i| \le 100$
- $00:00 \le T_i \le 23:59$
- The input will only contain alphanumeric characters and the colon symbol (':').

# Jojo and Trains

Jojo biasanya pergi ke kantor dengan menaiki kereta di stasiun Bee Noose. Format papan jadwal kereta di stasiun Bee Noose baru saja diubah. Format yang baru membuat Jojo bingung mencari jadwal yang sesuai.

Papan jadwal kereta di stasiun Bee Noose memiliki dua bagian. Bagian pertama berisi ID dari setiap kereta dan waktu keberangkatan dari kereta yang bersangkutan. Bagian kedua berisi asal dan tujuan dari setiap kereta.

Sayangnya, meski bagian pertama dari papan jadwal tersebut diurutkan berdasarkan waktu keberangkatan, bagian kedua dari papan jadwal tersebut tidak diurutkan sama sekali. Bantulah Jojo menemukan rute yang harus dia naiki dengan menggabungkan kedua bagian tersebut menjadi satu bagian yang utuh.

### Format Input

Baris pertama ber<mark>isi sebuah</mark> bilangan bulat N, jumlah rute yang ada di stasiun Bee Noose. Kemudian, akan ada 2N baris input.

N baris selanjutnya akan berisi dua string  $ID_i$  dan  $T_i$ . Bagian ini merupakan bagian pertama dari papan jadwal, yang memberi tahu Jojo bahwa kereta dengan ID  $ID_i$  akan berangkat pada  $T_i$ .

N baris selanjutnya akan berisi tiga string  $ID_i$ ,  $O_i$ , dan  $D_i$ . Bagian ini merupakan bagian kedua dari papan jadwal, yang memberi tahu Jojo bahwa kereta dengan ID  $ID_i$  berasal dari  $O_i$  dan menuju ke  $D_i$ .

# Format Output

Outputkan jadwal lengkap dari kereta di stasiun Bee Noose yang merupakan bagian pertama dari papan jadwal yang dilengkapi dengan asal dan tujuan setiap rute di sebelah waktu keberangkatannya.

#### Constraints

- $1 \le N \le 1000$
- $1 \le |ID_i| \le 20$
