

### Train: Star

As the mayor of Jolibi city, you need to improve the local transportation system. One way you could do that is to construct a train route. Jolibi city has N districts, and each district has exactly one train station. You plan to construct M paths so that the final route has a star shape. That is, there exists a permutation p such that there is a path from district  $p_1$  to  $p_2$ , from district  $p_1$  to  $p_3$ , ...., and from district  $p_1$  to  $p_n$  with no other paths.

You are a really busy mayor, so you asks Jojo as your personal assistant to construct the M routes for you. You need to determine whether the routes constructed by Jojo has a star shape!

## Format Input

The first line consists of two integers N and M, the number of districts and the number of paths. The next M lines each consists of two integers  $U_i$  and  $V_i$  which means that there is a path from district  $U_i$  to district  $V_i$ . Note that the path is bidirectional which means that for a given path  $(U_i, V_i)$  it is possible to travel from district  $U_i$  to district  $V_i$  and vice versa.

## Format Output

Output "YES" if the given route has a star shape or "NO" if it is not.

### Constraints

- $3 \le N \le 100$
- $0 \le M \le N \times (N-1)/2$
- $U_i \neq V_i$
- It is guaranteed that there will be no duplicate path in the input. The path (u, v) and (v, u) are considered as the same path.

## Sample Output 1 (standard output)

YES

### Sample Input 2 (standard input)

4 2

3 1

2 3

## Sample Output 2 (standard output)

ΝO

### Explanation

On the first sample, one of the valid star shape sequence is as follows: (3, 1, 4, 2).

### Train: Star

Sebagai walikota dari kota Jolibi, kamu perlu meningkatkan sistem transportasi di kota itu. Salah satu cara untuk melakukannya adalah dengan membangun rute kereta api. Kota Jolibi memiliki N distrik, dan setiap distrik memiliki tepat sebuah stasiun kereta api. Kamu berencana untuk membangun M jalan sehingga rute akhirnya berbentuk star. Artinya, terdapat sebuah permutasi p sehingga terdapat jalan dari distrik  $p_1$  ke  $p_2$ , dari distrik  $p_1$  ke  $p_3$ , ....., dan dari distrik  $p_1$  ke  $p_n$  tanpa ada jalan lainnya.

Kamu adalah seorang walikota yang sangat sibuk, jadi kamu meminta Jojo sebagai asisten pribadimu untuk membangun M jalan itu. Kamu perlu menentukan apakah rute yang dikonstruksi oleh Jojo memiliki bentuk star!

### Format Input

Baris pertama dari inputan terdiri dari dua bilangan bulat N dan M, jumlah distrik dan jumlah jalan. M baris berikutnya masing - masing terdiri dari dua buah bilangan bulat  $U_i$  dan  $V_i$  yang berarti ada jalan dari distrik  $U_i$  ke distrik  $V_i$ . Perhatikan bahwa jalan tersebut bidireksional yang berarti untuk suatu jalan  $(U_i, V_i)$  kita dapat pergi daridistrik  $U_i$  ke distrik  $V_i$  dan sebaliknya.

## Format Output

Keluarkan "YES" jika rute yang diberikan adalah rute berbentuk star atau "NO" jika bukan.

### Constraints

- $3 \le N \le 100$
- $0 \le M \le N \times (N-1)/2$
- $U_i \neq V_i$
- Dijamin tidak terdapat jalan duplikat pada inputan. Jalan (u, v) dan (v, u) dianggap jalan yang sama.

4 1
3 2
2 4
1 2

# Sample Output 2 (standard output)

NO

# Explanation

Pada sampel kasus pertama, salah satu dari sekuens rute berbentuk star yang valid adalah: (3, 1, 4, 2).
